

NBI S.p.A. and the Golinelli Arts and Science Centre

The Bolognese company, a fully-owned subsidiary of the Astaldi Group, was responsible for the entire construction, system installation and choice of materials for the new building of the Golinelli Foundation.

Bologna, 11 October 2017 – NBI S.p.A., a fully-owned subsidiary of the **Astaldi group**, completed the new **Marino Golinelli Foundation Arts and Science Centre**.

Being among the most important symbols of the city of Bologna, the **Marino Golinelli Foundation entrusted NBI S.p.A. with executing the entire project of constructing and installing all systems of its new building, as well as developing the materials** sought by the project designers, Mario Cucinella Architects.

With its 700 square metres of available space, the Golinelli Arts and Science Centre is to put on shows, interactive exhibitions and public events dedicated to art and science; it stands in the area of the Opificio Golinelli, home to the Golinelli Foundation.

The New Golinelli Arts and Science Centre will be inaugurated on Wednesday, 11 October, at 7:15 P.M., with an outdoor light and music show performed at the open square near the Opificio.

NBI S.p.A. specialises in plant engineering, facility management, energy services, energy requalification, and energy generation from renewable sources; it boasts a 60-year experience in every sector of civil, industrial and manufacturing plant engineering.

NBI S.p.A.

NBI S.p.A. is an Astaldi Group company specialising in plant engineering and integrated construction, facility management, energy services, energy requalification, and energy generation from renewable sources. In the field of plant engineering, NBI boasts an over-60-year experience in each and every sector of civil, industrial and manufacturing systems engineering, operating in projects involving electrical, mechanical, technological and specialised systems. It offers integrated and EPC solutions for complex systems and technologically advanced plants – from designing through construction, testing and commissioning to providing assistance and maintenance service – in such sectors as healthcare, infrastructure, office buildings and shopping centres, industry, tourism-hotels, and artistic-cultural heritage. For the healthcare sector it also offers the use of its patented ETRA system, which provides microclimate control in hospital operating theatres. NBI can guarantee excellent performance also thanks to its synergy with the other Group companies: Sartori Tecnologie Industriali, Consorzio Stabile Busi, and 3E System. Of particular importance are NBI's operations in Turkey and in South America, where it opened two new branches: NBI Elektrik Elektromekanik in Turkey and NBI S.p.A. Agencia en Chile for the Chilean and South American market.
